Stripe Stakeholders.

Role	Name and Contact Details
Account Executive(s)	Jens Natelberg Eyüp Akkurt
Solution Architect(s)	David Joos
Industries / Payments	SaaS Platform
Professional Services	Christian Stock Kasia Luczak

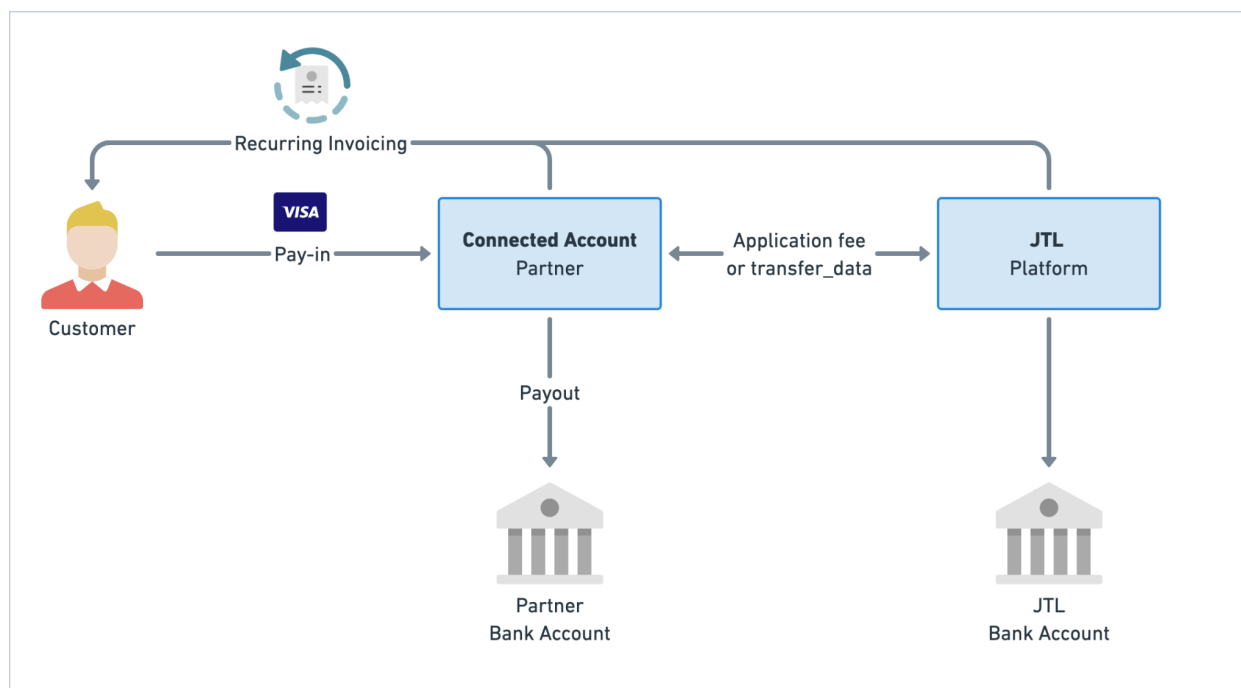

Business Objectives

JTL Software is building a new App Store to replace its fragmented Extension Store, aiming to provide a unified, scalable platform for its 15,000+ merchants and 1,000+ partners. The primary goal is to **centralize payments, automate subscription management, and calculate JTL's commissions** for partners, moving away from the current complex system where each partner manages their own PayPal account. This solution will create a seamless experience for merchants and enable JTL to monetize its ecosystem effectively.

Technical Requirements

- **Business model:** A multi-party marketplace platform using [Stripe Connect](#).
- **Merchant of record:** Third-party partners (connected accounts) must be the Merchant of Record (MoR) for their app sales. JTL should have the flexibility to become MoR at a later stage.
- **Charge type:** The integration must use [destination charges](#) with the `on_behalf_of` parameter to correctly assign MoR status to the partner.
- **Data model:** Customer, product, and subscription data will be centralized and stored on the JTL platform's Stripe account.
- **Partner experience:** Partners will be onboarded to [Express accounts](#) for a streamlined experience with transaction visibility.
- **Core functionality:** The solution must support monthly recurring subscriptions using [Stripe Billing](#) and automated tax calculation with [Stripe Tax](#).
- **Markets:** The initial launch will target Germany (DACH region), with plans to expand across the EU.
- **Timeline:** An MVP is required by the Partner Convention in May 2026, with a full rollout by the end of 2026.

Solution Architecture

Onboarding of partner as connected accounts

JTL will have to onboard connected accounts before enabling payments and payouts via the app marketplace.

You will have to request the following capabilities:

- Merchant (“Card payments capability”) if partner is MoR
- Recipient (“Stripe Transfers”)

We recommend the use of our accounts v2 API to create and onboard partners as connected accounts. You can find the comprehensive documentation on [accounts v2](#) here.

Example Account Creation

None

```
curl https://api.stripe.com/v2/core/accounts \
  -u "sk_live_PLATFORM_SECRET_KEY:" \
  -H "Content-Type: application/json" \
  -H "Stripe-Version: 2025-01-27.acacia" \
  -d '{
    "country": "DE",
    "dashboard": "express",
    "identity": {
      "country": "DE",
      "entity_type": "company"
    },
    "configuration": {
      "recipient": {
        "capabilities": {
          "stripe_balance": {
            "stripe_transfers": {
              "requested": true
            }
          }
        }
      },
      "merchant": {
        "capabilities": {
          "card_payments": {
            "requested": true
          }
        }
      }
    },
    "defaults": {
      "currency": "eur"
    }
  }'
```

Example Hosted Onboarding URL

None

```
curl https://api.stripe.com/v2/core/account_links \
  -u "sk_live_PLATFORM_SECRET_KEY:" \
  -H "Content-Type: application/json" \
  -H "Stripe-Version: 2025-01-27.acacia" \
  -d '{
    "account": "acct_PARTNER_ID",
    "use_case": {
      "type": "account_onboarding",
      "account_onboarding": {
        "refresh_url": "https://hub.jtl.com/partner/onboarding/refresh",
        "return_url": "https://hub.jtl.com/partner/onboarding/complete",
        "collection_options": {
          "fields": "eventually_due"
        }
      }
    }
  }'
```

Facilitate subscriptions

Product/Price Management

JTL will allow for simple monthly/yearly subscriptions with the launch in May. As outlined in our scoping session, we recommend the creation of products and prices on the platform account. JTL will **not** create products and prices on the connected accounts.

Step 1

None

```
curl https://api.stripe.com/v1/products \
  -u "sk_live_PLATFORM_SECRET_KEY:" \
  -d "name=Super Inventory Manager" \
  -d "description=Advanced inventory management extension for JTL-Wawi" \
  -d "metadata[jtl_app_id]=app_12345" \
  -d "metadata[partner_account]=acct_PARTNER_ID" \
  -d "metadata[partner_name]=Acme Software GmbH"
```

Step 2

None

```
curl https://api.stripe.com/v1/prices \
  -u "sk_live_PLATFORM_SECRET_KEY:" \
  -d "product=prod_ABC123" \
  -d "unit_amount=3000" \
  -d "currency=eur" \
  -d "recurring[interval]=month" \
  -d "metadata[jtl_app_id]=app_12345" \
  -d "metadata[plan_type]=monthly"
```

Payment + Subscription Creation

Step 1 – Customer creation

As a general best practice, we recommend creating a customer object ahead of the subscription creation for consistent customer data management.

None

```
curl https://api.stripe.com/v1/customers \
  -u REPLACE_WITH_YOUR_SECRET_KEY: \
  -d name="Kundenname" \
  --data-urlencode email="option2@test.com" \
  -d "address[city]"=Stuttgart \
  -d "address[country]"=DE \
  -d "address[line1]"=Hauptstrasse 2 \
  -d "address[line2]"= \
  -d "address[postal_code]"=70619 \
  -d "address[state]"=Baden-Württemberg"
```

Step 2 – Stripe Checkout & Subscription Creation

We recommend Stripe Checkout for an easy and optimized Checkout and subscription creation flow.

None

```
curl https://api.stripe.com/v1/checkout/sessions \
  -u REPLACE_WITH_YOUR_SECRET_KEY: \
  --data-urlencode success_url="URL" \
  -d customer=customer_ID \
  -d "line_items[0][price]"=price_1TD3N0PM469EdcdJlG2yI68c \
  -d "line_items[0][quantity]"=1 \
  -d mode=subscription \
  -d "subscription_data[transfer_data][amount_percent]"=50 \
  -d "subscription_data[transfer_data][destination]"=CA_ID \
  -d "subscription_data[on_behalf_of]"=CA_ID
```

Tax Handling

Invoices generated by Stripe can show the applicable VAT. In order to calculate the appropriate tax rate, you can either apply a **manual tax rate** or use **Stripe Tax** to automatically apply the appropriate tax rate.

Option 1 – Use Tax Rates

Create a tax rate via the Dashboard or API and add the tax rate in your Checkout session.

Create Tax Rate

None

```
curl https://api.stripe.com/v1/tax_rates \
  -u REPLACE_WITH_YOUR_SECRET_KEY: \
  -d display_name=USt \
  -d inclusive=true \
  -d percentage=19 \
  -d country=DE
```

Apply Tax Rate(s) to Checkout

None

```
curl https://api.stripe.com/v1/checkout/sessions \
  -u REPLACE_WITH_YOUR_SECRET_KEY: \
  --data-urlencode
success_url="https://bob-tinker-123456789.stripedemos.com/scenario/2938bc9b-9c1
d-479b-8c0d-e6f53aea7e00?checkout_session={CHECKOUT_SESSION_ID}" \
  -d customer=cus_UFStVlFAXBSONT \
  -d "line_items[0][price]"=price_1TD3N0PM469EdcdJlG2yI68c \
  -d "line_items[0][quantity]"=1 \
  -d "line_items[0][tax_rates][0]"=txr_1TGyFgPM469EdcdJbKCwhndx \
  -d mode=subscription \
  -d "subscription_data[transfer_data][amount_percent]"=50 \
  -d "subscription_data[transfer_data][destination]"=acct_1TECJoArPxFd1PFJ \
  -d "subscription_data[on_behalf_of]"=acct_1TECJoArPxFd1PFJ
```

Option 2 – Use Stripe Tax

Please use [this](#) documentation to automatically determine tax rates on behalf of your connected accounts.

Stripe's Recommended Services

Service	Recommendation	Reason / Notes
Migration and Implementation	Custom Proserv integration	Complexity of Billing + Connect Integration (+Tax). Custom work needed to build out Invoicing and Subscription UIs needed and JTL will benefit from Proserv consulting on best practices.
